SUMMARY

Full-Stack Engineer with production experience delivering end-to-end web applications using MERN, Next.js, and Python. Experienced in developing end-to-end web applications, from frontend interfaces to scalable backend systems and real-time streaming interfaces. Strong problem-solving abilities with a passion for building impactful products and delivering high-quality user experiences in fast-paced environments.

WORK EXPERIENCE

Full-Stack Developer Intern | Aharyas | Hyderabad Nov 2024 – Present

- Engineered and deployed an e-commerce platform, building responsive user interfaces and scalable RESTful APIs to deliver a seamless shopping experience.
- Optimized backend workflows and integrated core services, including database operations and Razorpay payment workflows, improving application efficiency.
- Partnered with cross-functional stakeholders to deliver features for a platform supporting 300+ artisan sellers and technical documentation to support rapid software iterations.
- Automated software validation by creating test cases and executing CI/CD pipelines via GitHub Actions and AWS, reducing deployment release time to under 5 minutes.

Web Development Intern | INVEZORO | Hyderabad May 2025 – Jul 2025

- Developed an EdTech products using React, Firebase, and Python, owning feature development across frontend interfaces, backend services, and database integrations.
- Engineered a coding assessment platform with online code execution, automated test evaluation, and real-time result visualization.
- Improved user engagement through responsive UI development, performance optimization, and close collaboration with stakeholders.

PROJECTS

Authentiq — *React.js · TypeScript · FastAPI · LangChain · HuggingFace · Supabase* [Live Demo](#)

- Architected a production-grade RAG pipeline using SentenceTransformers, FAISS, pgvector, and semantic retrieval techniques for plagiarism detection, achieving low-latency document similarity search.
- Engineered an AI-powered text analysis platform with a multi-model LLM ensemble, FastAPI backend, Supabase authentication, and optimized PostgreSQL queries, delivering 85% classification accuracy and reducing retrieval latency by 30%.

AI Short Video Generator — *Next.js · Gemini AI · LangChain · Convex · Inngest* [GitHub](#)

- Built end-to-end agentic pipeline: Gemini AI generates structured scene JSON via prompt templates → Inngest background jobs orchestrate rendering → Remotion outputs 1080p video in under 60 seconds.
- Implemented event-driven orchestration via Inngest and Convex reactive queries for real-time status tracking, eliminating UI blocking during video rendering.

Retail Demand Forecasting — *Python · SARIMA · LSTM · scikit-learn · pandas · numpy* [GitHub](#)

- Built a hybrid forecasting model on 20,000+ retail transaction records; ensemble achieved 12% MAE reduction over single-model baselines on seasonal demand patterns.
- Simulated inventory optimization strategies that reduced projected overstock events by ~ 20% through predictive forecasting and demand trend modeling.

SKILLS

Languages	JavaScript, TypeScript, Python, SQL
Frontend	React.js, Next.js, Tailwind CSS, HTML5/CSS3
Backend	Node.js, Express.js, FastAPI, Flask, REST APIs, WebSocket
Databases	PostgreSQL, MongoDB, MySQL, Supabase, Firebase, Redis
AI & LLM	LangChain, HuggingFace Transformers, RAG, Prompt Engineering, Gemini API, OpenAI API, NLP, Generative AI
Cloud & DevOps	AWS (EC2, S3), Docker, GitHub Actions, CI/CD, Vercel, Netlify
Tools	Git, Postman, Figma, Agile/Scrum, System Design, Razorpay

EDUCATION

B.Tech in Computer Science Engineering
Woxsen University, Hyderabad | CGPA: 8.1/10 | Sept 2022 – Mar 2026

Relevant coursework: Data Structures & Algorithms, DBMS, Operating Systems, Machine Learning, Cloud Computing
